

## DELAY ON/OFF TIME RELAY CRM-82TO

- true off delay timer (without supply voltage)

### Features:

- »»» Universal supply voltage AC/DC 12 - 240V
- »»» 2 time functions adjustable:
  - E - delay ON
  - A - delay OFF after the supply is switched off - after supply failure relay times for time t and switches off
- »»» Time range: 0.1s - 10min
- »»» Output contact: 2x changeover 8A
- »»» Output status indicated by LED
- »»» Clamp terminal
- »»» 1-MODULE, DIN rail mounting

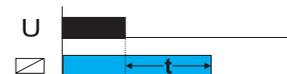

Technical parameters	CRM-82TO
<b>Number of functions:</b>	2
<b>Supply terminals:</b>	A1 - A2
<b>Supply voltage:</b>	AC/DC 12-240V (AC50-60Hz)
<b>Consumption:</b>	AC 0.7 - 3VA/DC 0.5 - 1.7W
<b>Supply voltage tolerance:</b>	-15%; +10%
<b>Supply indication:</b>	green LED
<b>Time ranges:</b>	0.1s - 10min
<b>Time setting:</b>	Rotary switch
<b>Time deviation:</b>	5%-mechanical setting
<b>Repeat accuracy:</b>	0.2%-set value stability
<b>Temperature coefficient:</b>	0.1%/°C, at= 20°C
<i>Output</i>	
<b>Changeover contacts:</b>	2, (AgNi)
<b>Rated current:</b>	8A/AC1
<b>Switching capacity:</b>	2000 VA/AC1, 192 W/DC
<b>Inrush current:</b>	10A/<3s
<b>Switching voltage:</b>	250V AC1/24V DC
<b>Minimum breaking capacity DC:</b>	500mW
<b>Output indication:</b>	red LED
<b>Mechanical life:</b>	3 x 10 <sup>7</sup>
<b>Electrical life (AC1)</b>	0.7 x 10 <sup>5</sup>
<i>Other information</i>	
<b>Operating temperature:</b>	-20.. +55°C
<b>Storage temperature:</b>	-30.. +70°C
<b>Electrical strength:</b>	4kV (supply - output)
<b>Operating position:</b>	any
<b>Mounting/DIN rail:</b>	DIN rail EN 60715
<b>Protection degree:</b>	IP40
<b>Overvoltage category:</b>	III
<b>Pollution degree:</b>	2
<b>Maximum cable size:</b>	max. 2.5mm <sup>2</sup> /with sleeve 1.5mm <sup>2</sup>
<b>Dimensions:</b>	90 x 17.6 x 64mm
<b>Weight:</b>	93g
<b>Standards:</b>	EN 61812-1, EN 61010-1

### Functions

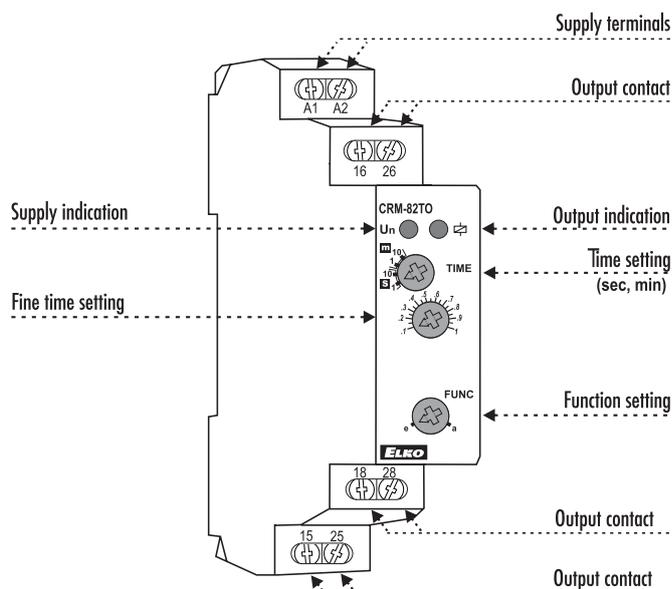

e - Delay ON

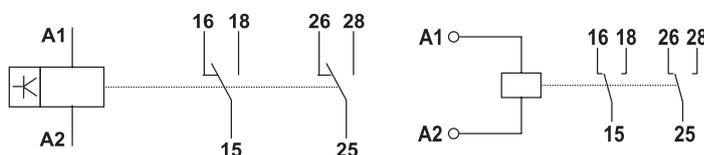

a - Delay OFF the power supply is switched off (min. time is 0.5 s)

### Description

### Connection

## UTILIZATION CATEGORIES

Utilization category	Typical application
<b>AC-1</b>	Non-inductive or slightly inductive loads, resistive furnaces. Example: resistive furnaces
<b>AC-2</b>	Slip-ring motors: starting, plugging and reversing. Example: squirrel-cage motors, lifts, elevators, compressors, pumps, air-conditioning
<b>AC-3</b>	Squirrel-cage motors: starting, disconnecting while running
<b>AC-4</b>	Squirrel-cage motors: starting, plugging, reversing, jogging. Example: lifts, elevators, compressors, pumps, air-conditioning, motor mixers.
<b>AC-5a</b>	Switching of electric discharge lamps
<b>AC-5b</b>	Switching of incandescent lamps
<b>AC-6a</b>	Switching of power transformers
<b>AC-6b</b>	Switching capacitor banks
<b>AC-7a</b>	Small inductive loads in domestic appliances and similar applications
<b>AC-7b</b>	Motor loads for domestic appliances
<b>AC-15</b>	Control of electromagnetic loads (>72 VA)
<b>AC-20</b>	Connecting and disconnecting under no-load conditions
<b>AC-21</b>	Switching of resistive loads including moderate overloads
<b>AC-22</b>	Switching of mixed resistive and inductive loads, including moderate overloads
<b>AC-23</b>	Switching of motors or other highly inductive loads
<b>DC-1</b>	Non-inductive or slightly inductive loads, resistance furnaces
<b>DC-3</b>	Shunt-wound motors: plugging, reversing, jogging, dynamic braking
<b>DC-5</b>	Series-wound motors: starting, plugging, reversing, jogging, dynamic braking
<b>DC-6</b>	Switching of incandescent lamps
<b>DC-13</b>	Control of electromagnets
<b>DC-20</b>	Connecting and disconnecting under no-load conditions
<b>DC-21</b>	Switching of resistive loads including moderate overloads
<b>DC-23</b>	Switching of highly inductive loads (e.g. series-wound motors)

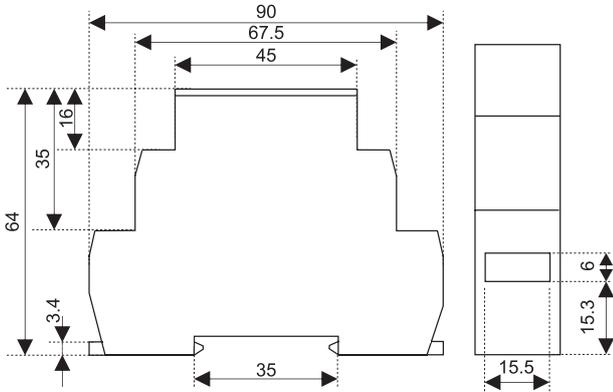

**Note: AC-11 is changed to AC-15 and DC-11 to DC-13 respectively**

Basic materials types, which are used for contact production of power relays are:

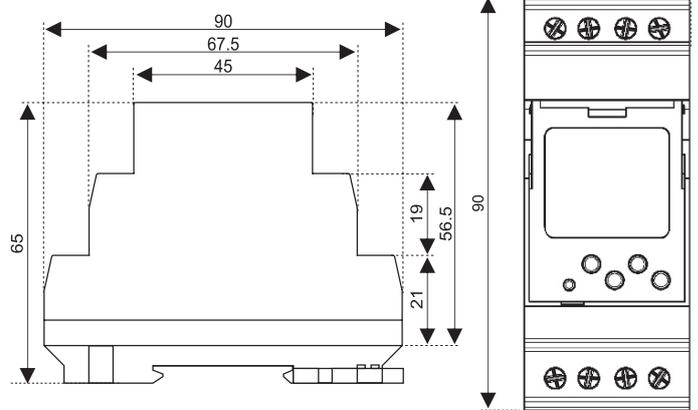

- AgCd** - for resistive loads (because of Cd malignity is this contact on recess).
- AgNi** - for resistive loads, good switches and transfers (no oxidation) low currents/voltages, is not for peak currents and loads with inductive factors.
- AgSn or AgSnO<sub>2</sub>** - for switching the loads with inductive part, not good for low currents/voltages, has better immunity for peak currents, good for switching DC, not so good for switching the resistive loads.
- Wf (tungsten)** - special contact for switching peak currents with inductive loads.
- gold alloy (AgNi/Au)** - for the 'better' contact for low currents/voltages, antioxidant.
